410-2-4-.15	Inpatient Hospice Services
410-2-4-.16	Freestanding Emergency Departments (FEDs)

410-2-4-.01 **Introduction.** This chapter focuses on existing health care facilities and the need for additional facilities. Methodologies for many facilities, i.e., general hospitals, nursing homes, specialty care assisted living facilities, rehabilitation, psychiatric and substance abuse, are specific in nature and project a finite number of beds needed. Swing beds, Long Term Acute Care Hospital beds, and Critical Care Access Hospital beds are allowed for hospitals which meet the criteria as specified in the appropriate Federal Directive. The home health methodology is based on upon a minimum level of utilization.

Author: Statewide Health Coordinating Council (SHCC)

Statutory Authority: Code of Ala. 1975, §22-21-260(4).

History: Effective May 18, 1993. **Amended:** Filed June 19, 1996; effective July 25, 1996. **Repealed and New Rule:**

Filed October 18, 2004; effective November 22, 2004. **Amended (SHP Year Only):** Filed December 2, 2014; effective January 6, 2015. **Repealed and New Rule:** Published March 31, 2020; effective May 15, 2020.

410-2-4-.02 Acute Care (Hospitals).

(1) **Introduction.** In this section, the methodology for computing acute care bed need will be described, and criteria for making adjustments to the computed bed need will be discussed.

(a) Definition: Hospital

1. Defined as printed in Rules of Alabama State Board of Health Division of Licensure and Certification Chapter 420-5-7 (effective August 26, 2013):

(i) "Hospital" means a health institution planned, organized and maintained for offering to the public, facilities and beds for use in the diagnosis and treatment of patients requiring in-patient medical care, out-patient medical care, or other care performed by or under the supervision of physicians due to illness, disease, injury, deformity, abnormality, or pregnancy.

(2) **Purpose**

(a) The purpose of the bed need methodology is to identify the number of acute general hospital beds needed at least three years into the future to assure the continued availability of quality hospital care for residents of the state of Alabama. Such number, as identified later in this section, shall be the basis for statewide health planning and certificate of need approval, except:

1. in circumstances that pose a threat to public health, and/or

2. when the SHCC makes an adjustment based on criteria specified later in this section.

(3) **Methodology**

(a) The planning area used in this methodology is the county with the exception of certain counties which are grouped together into one planning area due to a current or previous lack of an extant hospital in the area: Calhoun/Cleburne, Fayette/Lamar, Houston/Henry, Lee/Macon, Marengo/Choctaw/Perry, Montgomery/Lowndes, and Tallapoosa/Coosa.

(b) The methodology involves:

applying recent utilization data
to
projected population
and
using desired occupancy rates
to
determine needed beds.

(c) Hospital annual reports (Form BHD 134-A) for the past three years, are used in computing a three-year weighted average daily census (ADC) to provide the utilization measure. The weighted average emphasizes the most current census levels while taking into consideration census for the previous two years.

(d) Desired occupancy rates for each of eight service categories are those which were established under the National Guidelines for Health Planning. These are:

Medical/Surgical (M/S)	80%
M/S in Small Hospitals (under 4,000 total admissions/yr.)	75%
Obstetrics	75%
Pediatrics	
0-39 beds	65%
40-79 beds	70%
80 or more beds	75%
ICU-CCU	65%
Other	75%

(e) Computations by Service Category

1. Compute Average Daily Census (ADC) for each of last three years.

$$\text{ADC} = \frac{\text{Patient Days in Service Category}}{\text{Days Operational in Year (normally 365)}}$$

2. Compute Weighted Average ADC (Weighted ADC).

$$\frac{(\text{Current Year minus 2 Years ADC} \times 1) + (\text{Previous Year ADC} \times 2) + (\text{Current Year ADC} \times 3)}{3}$$

3. Compute Projected ADC.

$$\text{Projected ADC} = \text{Weighted ADC} \times \frac{3 \text{ Years above Current Year Projected Population}}{\text{Current Year Population}}$$

4. Compute Projected Beds Needed.

$$\text{Beds Needed} = \frac{\text{Projected ADC in Service Category}}{\text{Desired Occupancy Rate for Service Category}}$$

(f) Summation Across Service Categories

1. Compute Total Beds Needed

$$\begin{aligned} \text{Beds Needed} &= \text{Medical/Surgical Beds Needed} \\ &+ \text{Obstetrical Beds Needed} \\ &+ \text{Pediatric Beds Needed} \\ &+ \text{ICU-CCU Beds Needed} \\ &+ \text{Other Beds Needed} \end{aligned}$$

2. Compute Net Beds Needed or Excess

$$\text{Net Beds Needed (Excess)} = \text{Beds Needed} - \text{Existing Beds}$$

3. All CON Authorized beds shall be considered as Existing Beds for the purposes of need calculations for this section.

(4) **Criteria for Plan Adjustments**

(a) The SHCC may make adjustments to the needed beds determined by the methodology described above if evidence is introduced to the SHCC in each of the criteria, which follow, the exception to this is section 410-2-4-.02(5):

1. Evidence that residents of an area do not have access to necessary health services. Accessibility refers to the individual's ability to make use of available health

resources. Problems which might affect access include persons living more than 30 minutes travel time from a hospital, the lack of health manpower in some counties, and individuals being without the financial resources to obtain access to healthcare facilities; and

2. Evidence that a plan adjustment would result in health care services being rendered in a more cost-effective manner. The SHCC, by adopting the bed need methodology herein, has decided that beds in excess of the number computed to be needed are not cost-effective. Therefore, the burden of proof that a plan adjustment would satisfy this criteria rests with the party seeking that adjustment; and

3. Evidence that a plan adjustment would result in improvements in the quality of health care delivered to residents of an area. Many organizations, including the Division of Licensure and Certification within the Alabama Department of Public Health, the Professional Review Organization for the State, the Joint Commission on Accreditation of Health Care, and major third-party payers, continually address the issue of the quality of hospital care. Evidence of substandard care in existing hospital(s) within a county and/or evidence that additional hospital beds would enhance quality in a cost-effective way could partially justify a plan adjustment.

(i) In applying these three (3) plan adjustment criteria, special consideration should be given to requests from hospitals which have experienced average hospital-wide occupancy rates in excess of 80% for the most recent two-year period. It is presumed that the patients, physicians, and health plans using a hospital experiencing high occupancy rates have rendered positive judgments concerning the accessibility, cost-effectiveness, and/or quality of care of that hospital. Thus, the 80% occupancy standard adds a market-based element of validity to other evidence, which might be given in support of a plan adjustment for an area.

(ii) Numbers of beds do not always reflect the adequacy of the programs available within hospitals. In applying the three plan adjustment criteria to specific services, consideration should be given to the adequacy of both numbers of beds and programs offered in meeting patient needs in a particular county.

(5) Bed Availability Assurance for Acute Care
(Hospitals)

(a) On occasion, existing acute care hospitals are located in counties having significant population growth and/or hospitals with broad geographical service areas/statewide missions. These existing acute care hospitals are experiencing a shortage of acute care beds due to population growth and other demographic factors such as the aging baby boomers. The shortage of acute care beds is expected to only worsen. This shortage of acute care beds is causing patient transfers to be refused and ambulances to be turned-away (diverted) to more distant facilities or causing delays in transfers from the ER to an inpatient bed, which is not in the best interests of patients or the provision of quality and cost-effective health care. The Acute Care Bed Need Methodology is based on a county-planning area and is an average of all days of the month and all months of the year. It may not always adequately take into consideration the census level and acute care bed availability of an individual acute care hospital and the significant inpatient bed pressures on the existing hospital, patients, and medical staff.

(b) In order to assist those existing acute care hospitals that are experiencing high census levels, existing acute care hospitals may qualify to add acute care beds if the existing acute care hospital can demonstrate an average weekday acute bed (including observation patients) occupancy rate/census (Monday through Friday at midnight, exclusive of national holidays) for two separate and distinct periods of thirty (30) consecutive calendar days of the most recent twelve (12) month period at or above the desired average occupancy rate of eighty percent (80%) of total licensed acute care beds for that hospital.

(c) For existing acute care hospitals achieving the occupancy rate in paragraph 2, those hospitals may seek a CON to add up to ten percent (10%) of licensed bed capacity (not to exceed 50 beds), rounded to the nearest whole, or alternatively up to thirty (30) beds, whichever is greater (which shall be at the applicant's option). Such additional beds will be considered an exception to the bed methodology set forth elsewhere in this Section, provided, however, that any additional beds authorized by the CON Board pursuant to this provision shall be considered for purposes of other bed need methodology purposes. In addition to such additional information that may be required by SHPDA, a hospital seeking a

CON for additional beds under this section must provide, as part of its CON application the following information:

1. Demonstration of compliance with the occupancy rate in paragraph 2 (average of at least an 80% weekday occupancy rate for two (2) separate and distinct periods of thirty (30) consecutive calendar weekdays of the most recent 12-month period);

2. The application for additional acute care beds does not exceed ten percent (10%) of licensed acute care bed capacity (not to exceed 50 beds), rounded to the nearest whole, or alternatively up to thirty (30) acute care beds, whichever is greater.

3. The existing acute care hospital has not been granted an increase of beds under this section within the preceding twelve-month period, which time begins to run upon the issuance of a certificate of occupancy issued by the Alabama Department of Public Health; and

4. The hospital must have been licensed for at least one year as a general acute care hospital.

(d) Any acute care beds granted under this section can only be added at or/upon the existing campus of the applicant acute care hospital.

(6) **Planning Policy.** In a licensed general acute care hospital, the temporary utilization of inpatient rehabilitation beds, inpatient or residential alcohol and drug abuse beds, or inpatient psychiatric beds for medical/surgical purposes will not be considered a conversion of beds provided that the temporary utilization not exceed a total of twenty percent (20%) in any one specialty unit, as allowed by federal Medicare regulations in a facility's fiscal year.

(7) **Long Term Acute Care Hospitals (LTAC)**

(a) According to the Federal Centers for Medicare and Medicaid Services (CMS), a hospital is an excluded [from the Prospective Payment System] long term acute care hospital if it has in effect an agreement [with CMS] to participate as a general medical surgical acute care hospital and the average inpatient length of stay is greater than twenty-five (25) days. Ordinarily, the determination regarding a hospital's average length of stay is based on the hospital's most recently filed

cost report. However, if the hospital has not yet filed a cost report or if there is an indication that the most recently filed cost report does not accurately reflect the hospital's current average length of stay, data from the most recent six-month period is used.

(b) Long term acute care hospitals provide a hospital level of care to patients with an acute illness, injury or exacerbation of a disease process that requires intensive medical and/or functional restorative care for an extended period of time, on average twenty-five (25) days or longer. Generally, high technology monitoring or complex diagnostic procedures are not required. A long-term acute care hospital's primary patient service goal is to improve a patient's medical and functional status so that they can be successfully discharged to home or to a lower level of care. These patients generally do not meet admission criteria for nursing homes, rehabilitation, or psychiatric facilities.

(c) Alabama has an excess of licensed general acute care hospital beds, some of which could be used for long-term hospital care. Therefore, a general acute care hospital may apply for a certificate of need to convert acute care beds to long-term acute care hospital beds if the following conditions are met:

1. The hospital can satisfy the requirements of a long-term acute care hospital as outlined above.
2. The long-term acute care hospital can demonstrate that it will have a separate governing body, a separate chief executive officer, a separate chief medical officer, a separate medical staff, and perform basic functions of an independent hospital.
3. The long term acute care hospital has written patient transfer agreements with hospitals other than the host hospital to show that it could provide at least seventy-five percent (75%) of the admissions to the long term acute care hospital, based on the total average daily census for all participating hospitals.
4. The transfer agreements are with other hospitals in the same county and/or with hospitals in a region.

(d) To assure financial feasibility, the conversion of acute care beds to long-term acute care hospital beds shall be for a minimum of twenty-five (25) beds.

(e) Needs Assessment.

1. The bed need for the proposed long-term acute care hospital shall be for no more than five percent (5%) of the combined average daily census (ADC) of all the acute care hospitals in the region of the proposed LTACH for the most recent annual reporting period.

2. As an alternative an applicant may justify bed need based on a detailed assessment of patient discharges after stays of twenty-five (25) days or more.

3. An individual hospital's ADC or discharges shall not be used more than once in the computation of need for long term acute care hospital beds.

4. Due to accessibility issues all regions regardless of need methodology shall be permitted one LTACH facility with a maximum of twenty-five (25) beds, which has proven financially feasible.

(f) The hospital must also comply with all statutes, rules, and regulations governing the Certificate of Need Review Program in Alabama.

(8) **Pediatric Hospitals.** Any licensed freestanding pediatric hospital or wholly owned subsidiary may make application for a Certificate of Need based on the latest obtainable pediatric data. The data submitted as part of the application shall be verified by the SHPDA staff prior to consideration by the Certificate of Need Review Board.

(9) **Critical Access Hospitals (CAH).**

(a) An existing hospital in Alabama must meet the following criteria to be considered for certification by CMS as a CAH (a new Certificate of Need is not required unless the application is for a new CAH or the hospital where the CAH is to be located has been closed longer than twelve (12) months):

1. Is a public, nonprofit, or for-profit Medicare-certified hospital currently in operation and located in one of the following:

(i) A rural area as defined by the Office of Management and Budget (i.e., outside a Metropolitan Statistical area);

(ii) A rural census tract of a Metropolitan Statistical Area (MSA) determined under the most recent version of the Goldsmith Modification Formula;

(iii) An area designated as Rural by law or regulation of the State of Alabama or in the state's rural Health Plan as approved by the federal Centers for Medicaid and Medicare Services;

(iv) A hospital would qualify as a rural referral center or as a sole community hospital if the hospital were located in a rural area.

2. Hospitals, which closed on or after November 29, 1989, or are currently licensed health clinics or health centers that were created by downsizing a hospital, may reopen as a CAH;

3. Is located more than a 35-mile drive (or 15-mile drive in areas with mountainous terrain or with only secondary roads available) from another hospital or CAH, or is designated by the state as being a Necessary Provider of Health Care Services to area residents;

4. Makes available 24-hour emergency care services that the State determines are necessary for ensuring access to emergency care in each community served by the critical access hospital;

5. Provides not more than twenty-five (25) beds for acute inpatient care (which in the case of a swing bed facility can be used interchangeably for acute or SNF-level care) and the hospital may also provide up to ten (10) rehabilitation and ten (10) psychiatric beds so long as these are operated as separate units;

6. Maintains an average annual patient stay of no more than ninety-six (96) hours;

7. Meets critical access hospital staffing requirements;

8. Is a member of a rural health network and has an agreement with at least one full-service hospital (Affiliate) in the network for:

- patient referral and transfer
- development and use of communications systems
- provision of emergency and non-emergency transportation

9. Has an agreement regarding staff credentialing and quality assurance with one of the following:

(i) a hospital that is a joint member in the rural health network;

(ii) a peer review organization or equivalent entity;
or

(iii) another appropriate and qualified entity identified in the state rural health plan.

10. Federal statutes and eligibility requirements governing the CAH Program allow states to designate an existing hospital as a Necessary Provider of Health Care Services for its area residents if it meets all requirements for a CAH except the mileage between hospitals requirement. Alabama will utilize this statutory provision and designate Necessary Provider of Health Care Services for existing hospitals located in a county considered "at risk" for losing primary health care access. Alabama has reviewed numerous indicators of under-service in communities to determine criteria most appropriate for Alabama. Five criteria have been selected.

If the hospital meets one or more of these criteria, Alabama's Bureau of Health Provider Standards, Division of Provider Services, in consultation with the Office of Primary Care and Rural Health, will declare the facility a Necessary Provider of Health Care Services:

Criteria 1. The hospital is located in an area designated as a Health Professional Shortage Area.

Criteria 2. The hospital is located in an area designated as Medically Underserved.

Criteria 3. The hospital is located in a county with an unemployment rate higher than the statewide rate of unemployment.

Criteria 4. The hospital is located in a county with a percentage of population age 65 years and older greater than the state's average.

Criteria 5. The hospital is located in a county where the percentage of families with incomes below 200% of the federal poverty level is higher than the state average for families with incomes below 200% of the federal poverty level.

Any existing hospital, which otherwise satisfies CAH criteria except the mileage requirement but does not meet at least one of the above criteria for certification as a Necessary Provider of Health Services, may appeal to Alabama's State Health Officer. Evaluation of appeals will be based on submission of objective information, which demonstrates the presence of extenuating circumstances which may adversely impact an area's access to health care if the existing hospital is not declared a Necessary Provider of Health Services. Based on evidence presented, the State Health Officer may decide to issue a variance from established criteria and declare the appealing hospital a Necessary Provider of Health Care Services.

(a) In order to meet the federal CAH requirements as to the number of beds, an existing hospital may distinguish "authorized" and "licensed" general acute care and swing beds as in the rules established by the ADPH and SHPDA.

(b) The "Medicare Prescription Drug, Improvement and Modernization Act" (Public Law H.R. 1 and S. 1 June 27, 2003) is an extensive revision to the Medicare program and contains provisions relating the Critical Access Hospital Program found in Section 405 of the Act. These provisions allow more flexibility for hospitals converting to CAH status.

410-2-4-.03 Nursing Homes.

(1) **Definition.** A Nursing Home is a business entity engaged in providing housing, meals and care to sick or disabled individuals who require medical care, nursing care, or rehabilitative services on a daily or more frequent basis. Hospital swing beds are included in Section 410-2-4-.09.

(2) **Analysis of Existing Facilities**

(a) As of October 2019, there were 232 licensed nursing homes, excluding state owned and operated facilities, totaling 27,383 beds operating in the state of Alabama. Average occupancy for the 228 facilities was approximately 84.8% for Fiscal Year 2018. Currently, there are approximately 32.9 beds per one thousand persons age 65 and older.

(b) Approximately 84.6 % of nursing home beds in Alabama are occupied by persons age 65 and older. This aged population represents 16.5% of the state's total population and is projected to increase during the coming years.

(c) Nursing homes provide various levels of care for those needing their services. These include:

1. Short-term post hospital care (PAC) for those who require specialized rehabilitation after their acute care hospital episodes. Most of these PAC admissions return home.

2. Long term care for those with complex chronic conditions requiring care and supervision unavailable in a home setting through available supports and services.

3. Palliative care for hospice patients unable to remain in a home environment.

4. Memory care in a secured environment for those with complex chronic conditions requiring care and supervision unavailable in a home setting through available supports and services and suffering from Alzheimer's disease and other forms of dementia.

(3) **Long Term Supports and Services**

(a) Efforts should be made to maintain an optimum quality of life for long term care residents in their home for

as long as possible. The types and amounts of services needed for long term care residents vary. In order to enhance opportunities for residents needing long term care services, which would allow them to remain in their homes for as long as possible, the health care and social needs of these residents should be evaluated by an independent multidisciplinary team prior to nursing home admission. This team should also evaluate the ability of resources within the local community to meet the needs of these residents.

(b) To foster the ability of Medicaid beneficiaries needing long term care and supports to remain and thrive in their homes, the Alabama Medicaid Agency implemented a home and community-based services (HCBS) program. After consultation with consumers, consumer advocates, and a wide range of health care providers, Medicaid has further enhanced the HCBS program by developing and implementing the integrated care network (ICN) program. The ICN program focuses on bringing medical case management to the home and community-based services (HCBS) population to permit better medical risk assessment of those in the HCBS program which promotes their ability to thrive at home. The ICN also case manages Medicaid beneficiaries in nursing facilities through the existing minimum data set (or MDS) assessments, which includes a return to home assessment. Individuals who might otherwise require admission to a nursing home are now able to remain in their homes because of the home and community-based services provided through this program. Currently, there are nearly 8,200 residents whose long-term care needs can be met through the program.

(4) **Financing**

(a) The Alabama Medicaid program was started in 1970, and as a result, the nursing home industry grew rapidly during the 70s. Since the 1980 adoption of a more restrictive bed need methodology, the number of beds added have tapered off considerably. Also, with the containment of health care costs as a primary concern, a moratorium on additional nursing home beds was established in August of 1984, and lifted in June of 1989, and was reinstated in 2005. Medicaid patients account for 53.7% of patient days, private pay patients 20.7%, and Medicare 14.5% as of FY 2018.

(5) **Availability**

(a) The 232 licensed nursing homes located in Alabama are generally geographically well distributed and are accessible

to the majority of the elderly population within thirty (30) minutes normal driving time. Every Alabama county has a least one nursing home.

(6) **Continuity**

(a) Discussion

1. Nursing homes should provide care appropriate to resident needs. To ensure that comprehensive services are available and to ensure residents are at a proper level of care, nursing homes should provide, or should have agreements with other health care providers to provide, a broad range of care. When providing these services, or a part of any agreement to provide these services, transfer of residents and support service should be provided as necessary.

(b) Planning Policy

1. The rendering of complementary long-term care services, such as home health care adult day care, senior citizen nutrition programs, hospice, etc., to long term care recipients should be fostered and encouraged. In areas where such services are sufficiently developed, health care facilities should be encouraged to have agreements that increase the availability of such services to residents. In areas where such services are not sufficiently available, facilities should be encouraged to develop and offer such services. The Alabama Department of Public Health, Bureau of Provider Standards, is encouraged to make the appropriate changes to the licensure requirements.

(7) **Quality**

(a) Quality care is an obligation of all nursing homes operating in Alabama. Each facility must meet standards of care as established by the federal government (Medicare and Medicaid Requirements of Participation) and the Alabama State Board of Health Rules and Regulations. The Bureau of Provider Standards of the Alabama Department of Public Health is responsible for determining compliance. Additionally, the Quality Improvement Organization (QIO) includes some nursing homes in its review.

(8) **Nursing Home Bed Need Methodology**

(a) Purpose. The purpose of this nursing home bed need methodology is to identify, by county, the number of nursing home beds needed to assure the continued availability, accessibility, and affordability of quality nursing home care for residents of Alabama.

(b) General. Formulation of this bed need methodology was accomplished by a committee of the Statewide Health Coordinating Council (SHCC). The committee which provided its recommendations to the SHCC, was composed of providers and consumers of health care. Only the SHCC, with the Governor's final approval, can make changes to this methodology except that the SHPDA staff shall annually update bed need projections and inventories to reflect more current population and utilization statistics. Adjustments are addressed in paragraph (e).

(c) Basic Methodology. Considering the availability of more home and community-based services for the elderly in Alabama, there should be a minimum of 40 beds per 1,000 population 65 and older for each county.

1. The beds need formula is as follows:

$(40 \text{ beds per thousand}) \times (\text{population 65 and older}) = \text{Projected Bed Need}$

2. Due to budgetary limitations of the Alabama Medicaid Agency, additional nursing home beds cannot be funded by Medicaid funds; therefore, applications for additional nursing home beds to be funded by Medicaid should not be approved. Based upon the funding shortage, projects for additional nursing home beds would not be financially feasible. Until further action by the Statewide Health Coordinating Council, there shall be no need for additional skilled nursing beds in the State of Alabama.

(d) Planning Policies

1. The county's annual occupancy for the most recent reporting year should be at least 97% before additional nursing home beds are approved.

2. Conversion of existing hospital beds to nursing home beds should be given priority over new construction when the conversion is significantly less costly and the existing structure can be adapted economically to meet licensure and certification requirements. The conversion shall result in a

decrease in the facility's licensed acute care beds equal to or greater than the number of beds to be converted.

3. Bed need projections will be based on a three-year planning horizon.

4. Planning will be on a county-wide basis.

5. Subject to SHCC adjustments, no beds will be added in any county where that county's projected ratio exceeds 40 beds per 1,000 population age 65 and older.

6. No new free-standing nursing home should be constructed having less than fifty (50) beds.

7. ICF/IID facilities, state and privately owned, will not be included in the application of the SHCC adopted nursing home bed need methodology.

8. When any nursing home facility relinquishes its license to operate, either voluntarily or involuntarily other than by a Certificate of Need approved transfer, or by obtaining title by a foreclosure as specified in the opinion rendered by the Alabama Attorney General, November 17, 1980, the need for the facility and its resources will automatically be eliminated from the facilities portion of the State Health Plan. The new bed need requirement in the county where the facility was located will be that number which will bring the county ratio up to 40 beds per 1,000 population 65 and older.

(e) Adjustments. The bed need, as determined by the methodology, is subject to adjustments by the SHCC. The nursing home bed need may be adjusted by the SHCC if an applicant can prove that the identified needs of a targeted population are not being met by existing nursing homes in the county of the targeted population.

Statutory Authority: Code of Ala. 1975, §22-21-260(4).

History: Effective March 8, 1993. **Amended:** Filed June 19, 1996; effective July 25, 1996. **Amended:** Filed August 14, 2012; effective September 18, 2012. **Amended (SHP Year Only):** Filed December 2, 2014; effective January 6, 2015. **Repealed and New Rule:** Published March 31, 2020; effective May 15, 2020.

410-2-4-.04 Limited Care Facilities - Specialty Care Assisted Living Facilities.

(1) **Definition.** Specialty Care Assisted Living Facilities ("SCALFs") are intermediate care facilities which provide residents with increased care and/or supervision designed to address the residents' special needs due to the onset of dementia, Alzheimer's disease or similar cognitive impairment in addition to assistance with normal daily activities including, but not limited to, restriction of egress for residents where appropriate and necessary to protect the resident and which require a license from the Alabama Department of Public Health as a Specialty Care Assisted Living Facility pursuant to ALA. ADMIN. CODE r 420-5-20, et seq.

(2) **Specialty Care Assisted Living Facility Bed Need Methodology**

(a) **Purpose.** The purpose of this specialty care assisted living facility bed need methodology is to identify, by county, the number of beds needed to assure the continued availability, accessibility, and affordability of quality care for residents of Alabama.

(b) **General.** Only the SHCC, with the Governor's final approval, can make changes to this methodology except that the SHPDA staff shall annually update bed need projections and inventories to reflect more current population and utilization statistics. Adjustments are addressed in paragraph (e).

(c) Basic Methodology. Considering the availability of more home and community-based services for the elderly in Alabama, there should be a minimum of six (6) beds per 1,000 population age 65 and older for each county.

The bed need formula is as follows:

$(6 \text{ beds per thousand}) \times (\text{population age 65 and older}/1,000) =$
Projected Bed Need

(d) Planning Policies

1. Projects to develop specialty care assisted living facilities or units in areas where there exist medically underserved, low income, or minority populations should be given priority over projects not being developed in these critical areas when the project to develop specialty care assisted living facilities in areas where there exists medically underserved, low income or minority populations is not more costly to develop than other like projects.

2. Bed need projections will be based on a three-year planning horizon.

3. Planning will be on a countywide basis.

4. Subject to SHCC adjustments, no beds will be added in any county where that county's projected ratio exceeds six (6) beds per 1,000 population age 65 and older, except in the case of any county meeting the conditions delineated in sections (d) 6 - 8 below.

5. When any specialty care assisted living facility relinquishes its license to operate, either voluntarily or involuntarily other than by a Certificate of Need approved transfer, or by obtaining title by a foreclosure as specified in the opinion rendered by the Alabama Attorney General, November 17, 1980, the beds authorized for use at that facility shall be returned to inventory. The new bed need requirement in the county where the facility was located will be that number which will bring the county ratio up to six (6) beds per 1,000 population age 65 and older, except in the case of any county meeting the conditions delineated in sections (d) 6 - 8 below.

6. Applicants for adjustments have provided evidence to the SHCC that certain counties in the state have a patient base drawn from multiple additional counties for several

reasons, including but not limited to: the location of other family members; the difficulties in constructing and operating a financially viable SCALF in rural areas; the location of other medical providers; and the creation of multi-level senior living developments allowing for "aging in place." The SHCC recognizes that an alternative means of assessing need for certain counties is necessary. Any county with a projected population, age 65 and older, of 20,000 or more qualifies for an alternative need projection which shall account for both the projected need and the existing CON authorized bed capacity of that county, and all counties contiguous to that county. The sum of the authorized bed capacity of the target county and all contiguous counties shall be subtracted from the sum of the projected need for the target county and all contiguous counties. This projected net need shall be compared to the projected net need determined under the methodology in section (2)(c) above. The larger of the two projected net need values shall be the need for the target county and shall be reflected on any Statistical Update published by SHPDA.

7. Additional need may be shown in situations involving a sustained high occupancy rate either for a county or for a single facility. An applicant may apply for additional beds, and thus the establishment of need above and beyond the standard methodology utilizing one of the following two policies. Once additional beds have been applied for under one of the policies, that applicant shall not qualify to apply for additional beds under either of these policies unless and until the established time limits listed below have passed. All CON authorized SCALF beds shall be included in consideration of occupancy rate and bed need.

(i) If the occupancy rate for a county is greater than 92% utilizing the census data in the most recent full year "Annual Report(s) for Specialty Care Assisted Living Facilities (Form SCALF-1)" published by or filed with SHPDA, an additional need of the greater of either ten percent (10%) of the current total CON Authorized bed capacity of that county or sixteen (16) total beds may be approved for either the creation of a new facility or for the expansion of existing facilities within that county. However, due to the priority of providing the most cost-effective health care services available, a new facility created under this policy shall only be allowed through the conversion of existing beds at an Assisted Living Facility currently in possession of a regular, non-probationary license from the Alabama Department of Public Health. Once additional need has been shown under this policy, no new need shall be

shown in that county based upon this rule for twenty-four (24) months following issuance of the initial CON, to allow for the impact of those beds in that county to be analyzed. Should the initial applicant for beds in a county not apply for the total number of beds allowed to be created under this rule, the remaining beds are available to be applied for by other providers in the county meeting the conditions listed in this rule.

(ii) If the occupancy rate for a single facility is greater than 92% utilizing the census data in the last two (2) most recent full year "Annual report(s) for Specialty Care Assisted Living Facilities (Form SCALF-1)" published by or filed with SHPDA, irrespective of the total occupancy rate of the county over that time period, up to sixteen (16) additional beds may be approved for the expansion of that facility only. Once additional beds have been approved under this policy, no new beds shall be approved for that facility for twenty-four (24) months following issuance of the CON to allow for the impact of those beds at that facility to be analyzed.

8. No application for the establishment of a new, freestanding SCALF shall be approved for fewer than sixteen (16) beds, to allow for the financial feasibility and viability of a project. Need may be adjusted by the Agency for any county currently showing a need of more than zero (0) but fewer than sixteen (16) total beds to a total need of sixteen (16) new beds, but only in the consideration of an application for the construction of a new facility in that county. Need shall not be adjusted in consideration of an application involving the expansion of a currently authorized and licensed SCALF or for the conversion of beds at an existing Assisted Living Facility.

9. Any CON Application filed by a licensed SCALF shall not be deemed complete until, and unless:

(i) The applicant has submitted all survey information requested by SHPDA prior to the application date; and

(ii) The SHPDA Executive Director determines that the survey information is complete.

10. No licensed SCALF filing an intervention notice or statement in opposition in any CON proceeding may cite or otherwise seek consideration by SHPDA of such facility's utilization data until, and unless:

(i) The intervenor or opponent has submitted all survey information requested by SHPDA prior to the application date; and

(ii) The SHPDA Executive Director determines that the survey information is complete.

(e) Adjustments. The bed need, as determined by the methodology, is subject to adjustments by the SHCC. The specialty care assisted living facility bed need may need to be adjusted by the SHCC if an applicant can prove that the identified needs of a targeted population are not being met by existing specialty care assisted living facilities in the county of the targeted population.

(f) Notwithstanding the foregoing, any application for Certificate of Need for specialty care assisted living facility beds for which a proper letter of intent was duly filed with SHPDA prior to the adoption of the bed need methodology shall not be bound by this bed need methodology.

(g) The determination of need for specialty care assisted living facility beds shall not be linked to the number of existing assisted living beds in the county.

(h) In order to determine if this methodology and related planning policies accurately reflect the need for SCALF beds in the state, the SHCC requires additional information to determine the county of residence prior to admission to each SCALF. The SHCC requests that the Health Care Information and Data Advisory Council add a section to the "Annual Report for Specialty Care Assisted Living Facilities (Form SCALF-1)" reporting the county of residence for patients admitted to each SCALF. After the Annual Report is modified by the Health Care Information and Data Advisory Council, the SHCC shall use the information collected to review this methodology at the end of the third mandatory reporting period to determine if additional revisions to this methodology are required to better reflect both the existing utilization of SCALF services and the potential need for additional SCALF beds.

Statutory Authority: Code of Ala. 1975, §22-21-260(4).

History: New Rule: Filed June 19, 1996; effective July 25, 1996. **Repealed and New Rule:** Filed January 16, 2001; effective February 20, 2001. **Amended:** Filed July 29, 2003; effective September 2, 2003. **Repealed and New Rule:** Filed October 18, 2004; effective November 22, 2004. **Amended:** Filed August 18, 2012, effective September 18, 2012. **Amended (SHP Year Only):** Filed December 2, 2014; effective January 6, 2015. **Repealed and New Rule:** Published March 31, 2020; effective May 15, 2020.

410-2-4-.05 Assisted Living Facilities.

(1) **Definition.** Assisted living facilities provide, or offer to provide, any combination of residence, health supervision, and personal care to three (3) or more individuals in need of assistance with daily living activities.

(2) **Existing Assisted Living Facilities.** As of September 2019, there were 194 licensed assisted living facilities totaling 7,253 beds operating in the state of Alabama, or approximately 8.7 beds per 1,000 persons age 65 and older. Assisted living is available in Alabama on a private-pay basis only.

(3) **Availability.** The 194 licensed assisted living facilities are concentrated in the more populated counties. Three (3) counties contain 35% of the assisted living beds and ten (10) counties contain 65% of the assisted living beds. Forty-eight (48) of the sixty-seven (67) counties have assisted living facilities and nineteen (19) counties have no assisted living facilities.

(4) **Continuity.**

(a) **Discussion.** Assisted living facilities should provide assistance appropriate to resident needs. To ensure that comprehensive services are available and to be certain residents are at a proper level of care, assisted living facilities should provide, or should have agreements with health care providers to provide, a broad range of care. When providing these services, transfer of residents and support services should be provided as necessary.

(b) **Self-Help Program.** Assisted living providers will be encouraged to provide a level of assistance that would help and encourage the residents to be self-sufficient for as long as possible before requiring a change to a more dependent home.

(5) **Quality.** Quality assistance is an obligation of all assisted living facilities operating in Alabama. Each facility must meet standards established by the Alabama Department of Public Health (see paragraph 4 above). The Bureau of Health Provider Standards of the Alabama Department of Public Health is responsible for determining compliance.

A current listing of licensed Assisted Living Facilities in Alabama may be found on the Alabama Department of Public Health's website, www.alabamapublichealth.gov.

410-2-4-.06 Adult Day Care Programs.

(1) **Definition.** Adult day care programs may be identified as structured, comprehensive programs designed to offer lower cost alternatives to institutionalization for newly or chronically disabled adults who cannot stay alone during the day, but who do not need 24-hour inpatient care. Designed to promote maximum independence, participants usually attend on a

scheduled basis. Services may include nursing, counseling, social services, restorative services, medical and health care monitoring, exercise sessions, field trips, recreational activities, physical, occupational and speech therapies, medication administration, well balanced meals, and transportation to and from the facility. Adult day care can provide the respite family members require to sustain healthy relationships while caring for their elderly loved one at home. Adult day care programs provide services to one or more adults not related by blood or marriage to the owner and/or administrator.

(2) **Analysis of Existing Adult Day Care Programs.**

Adult day care programs are not currently licensed by any department of the state of Alabama. As a consequence, it is extremely difficult to ascertain the actual number of such programs within Alabama. However, Adult Day Care Centers are approved through the Alabama Department of Human Resources, the Alabama Department of Senior Services and the Alabama Medicaid Agency. The Alabama Department of Mental Health also uses adult day care.

(3) **Adult Day Care Programs as Alternatives to Nursing Home Admission**

(a) Efforts should be made to maintain an optimum quality of life for individuals who require extended or long-term care. The types and amounts of services needed for these individuals vary. In order to enhance opportunities for individuals needing extended or long-term care services, the needs of these individuals should be evaluated prior to admission to any extended care or long-term care program, including nursing homes, assisted living homes, and adult day care programs.

(b) In an effort to encourage the development and utilization of alternatives to nursing home and assisted living (domiciliary) care, adult day care programs and services for the elderly should be utilized to the greatest extent possible. It is the intent to provide for the establishment of additional adult day care programs in order that: (i) the elderly will be given the opportunity to remain with their families and in their communities rather than being placed in nursing homes or state institutions; (ii) families, particularly those with one or more members working outside of the home, may keep their elderly parents and relatives with them instead of having to place them in impersonal institutions; and (iii) the state of Alabama can

deal more effectively and economically with the needs of its elderly citizens.

(4) **Financing.** Historically, all adult day care programs have been private pay with some assistance coming from public and community sources.

(5) **Availability.** Adult day care programs are concentrated in the more populated counties. Many counties have no adult day care programs.

(6) **Continuity**

(a) **Discussion.** Adult day care programs should provide care appropriate to the needs of their participants. To ensure that comprehensive services are available and that certain participants receive a proper level of care, adult day care programs should provide, or should have agreements with other health care providers to provide, a broad range of care. When providing these services, transportation and support services for participants should be provided as necessary.

(b) **Self-Help Program.** Adult day care program providers should be encouraged to provide a level of care that will help maintain and improve function and encourage participants to be as independent as they can for as long as possible before the condition of such participants requires a change to a more dependent level of care.

(7) **Quality.** Quality care is an obligation of all adult day care programs operating in Alabama. Each program should comply with applicable state and local building regulations, and zoning, fire, and health codes and ordinances. In addition, each program must comply with all requirements of its funding sources, including requirements with respect to a Medicaid Waiver, if applicable.

(8) **Promotion of Adult Day Care Programs.** The alternate special affordable care offered by adult day care programs should be publicized by responsible agencies using some or all of the following:

- (a) Public Service Announcements
- (b) Physicians (provide literature)
- (c) Hospitals (discharge planners)

- (d) Nursing Homes
- (e) The Alabama Commission on Aging
- (f) The American Association of Retired Persons
- (g) Community Service Agencies/Projects
- (h) Religious Organizations
- (i) The Alabama Department of Human Resources
- (j) The Alabama Department of Senior Services

Author: Statewide Health Coordinating Council (SHCC)

Statutory Authority: Code of Ala. 1975, §22-21-260(4).

History: New Rule: Filed June 19, 1996; effective July 25, 1996. **Repealed and New Rule:** Filed October 18, 2004; effective November 22, 2004. **Amended (SHP Year Only):** Filed December 2, 2014; effective January 6, 2015. **Repealed and New Rule:** Published March 31, 2020; effective May 15, 2020.

410-2-4-.07 **Home Health.**

(1) **Definitions**

(a) Home Health Agency. A home health agency is an organization that is primarily engaged in providing skilled nursing services and other therapeutic services. Services are provided on an intermittent basis. Each visit must be less than four hours in duration. Any visit made to or procedures performed on a patient at their home must only be made upon a physician's written order. Home health providers shall provide at least the following services, including, but not limited to, skilled nursing care, personal care, physical therapy, speech therapy, medical social services, and medical supplies services.

(b) Home Health Care. Home health care is that component of a continuum of comprehensive health care whereby intermittent health services are provided to individuals and families in their places of residence for the purpose of promoting, maintaining or restoring health, or of maximizing the level of independence, while minimizing the effects of disability and illness, including terminal illness. Services appropriate to the needs of the individual patient and family

are planned, coordinated, and made available by providers organized for the delivery of home health care through the use of employed staff, contractual arrangements, or a combination of employed staff and contractual arrangements. There is no licensure requirement for home health agencies in Alabama.

(c) **Home Health Services.** Home health services are made available based upon patient care needs as determined by an objective patient assessment administered by a multidisciplinary team or a single health professional. Centralized professional coordination and case management are included. These services are provided under a plan of treatment certified by a physician that may include, but are not limited to, appropriate service components, such as medical, nursing, social work, respiratory therapy, physical therapy, occupational therapy, speech therapy, nutrition, homemaker home health aide service, and provision of medical equipment and supplies.

(d) Section 22-21-265, Code of Ala. 1975, allows an existing home health agency to accept referrals from a county which is contiguous to a county in which the agency holds CON authority. Additional restrictions are provided in statute.

(2) **Inventory of Existing Resources.** The State Health Planning and Development Agency annually compiles several home health agency reports and identifies counties which are in need of an additional provider. A current listing of home health agencies is located at <http://www.shpda.alabama.gov> or <http://www.adph.org>.

(3) **Planning Policy - (Availability).** Home health visits are scheduled on an intermittent basis and must be available seven days a week at such times as may be ordered by referring physicians. While availability must include provision for weekend and evening services, emergency services are not within the scope or purpose of home health providers.

(4) **Accessibility**

(a) Home health services must be obtainable by the general public in every county in the state.

(b) Because physicians and other referral sources are sometimes unfamiliar with the total scope of services offered by home health providers, patients' accessibility is also limited by failure to refer appropriately to home health services. Every agency should provide an active community information

program to educate consumers and professionals to the availability, nature, and extent of home health services.

(c) Services are provided in patients' homes, and accessibility to services is not dependent upon physical or geographic accessibility to the home health provider's offices. The essential characteristics are location of home health visiting staff in proximity to patients' places of residence and accessibility of the provider to patients, physicians, and other referral sources.

(5) **Acceptability and Continuity**

(a) Acceptability is the willingness of consumers, physicians, discharge planners, and others to use home health services as a distinct component of the health care continuum.

(b) Continuity reflects a case management approach that allows patient entry into the health care continuum at the point that ensures delivery of appropriate services. Home health care provides a balanced program of clinical and social services and may serve as a transitional level of care between inpatient treatment and infrequent physician office visits. Home health also extends certain intensive, specialized treatments into the home setting.

(c) **Planning Guides and Policies**

1. **Planning Guide.** Home health providers shall maintain referral contacts with appropriate community providers of health and social services to facilitate continuity of care and to coordinate services not provided directly by the home health provider.

2. **Planning Policy.** Home health providers must furnish discharge-planning services for all patients.

(6) **Quality**

(a) Quality is that characteristic which reflects professionally appropriate and technically adequate patient services.

(b) The state home health industry, through development of ethical standards and a peer review process, can foster provision of quality home health care services. Each provider must establish mechanisms for quality assurance,

including procedures for resolving concerns identified by patients, physicians, families or others involved in patient referral or patient care.

(c) Planning Policies

1. Planning Policy. The county is the geographic unit for need determination, based upon population.

2. Planning Policy - (New Providers). When a new provider is approved for a county, that provider will have eighteen (18) months from the date the Certificate of Need is issued to meet the identified need in the county before a new provider may apply for a Certificate of Need to serve a county.

3. Planning Policy - Favorable Consideration. Home health agencies that achieve or agree to achieve Charity Care plus Self Pay at the statewide average percent for all home health providers shall be given favorable CON consideration over home health applicants that do not achieve the statewide average for Charity Care plus Self Pay, but not less than one percent (1%). The latest published SHPDA data report HH-11 shall be used to determine the assets to governmental and non-profit organizations at the individual county level to be considered. See section 410-2-2-.06 for the definition of charity care.

4. Planning Policy - CON Intervention/Opposition.

(i) Any CON application filed by a health care facility shall not be deemed complete until, and unless:

(I) The applicant has submitted all survey information requested by SHPDA prior to the application date; and

(II) The SHPDA Executive Director determines that the survey information is substantially complete.

(ii) No Home Health Agency or Hospice Agency filing an intervention notice or statement in opposition in any CON proceeding may cite or otherwise seek consideration by SHPDA of such facility's utilization data until, and unless:

(I) the intervenor or opponent has submitted all survey information requested by SHPDA prior to the application date; and

(II) the SHPDA Executive Director determines that the survey information is substantially complete.

5. Home Health Need Methodology

(i) Purpose. The purpose of this home health need methodology is to identify, by county, the number of home health agencies needed to assure the continued availability, accessibility, and affordability of quality home health care for residents of Alabama.

(ii) Basic Methodology. In order to perform the calculations for this methodology, population data from the Center for Business and Economic Research (CBER) is utilized. All time frames are based on the year of the latest reported data.

Step 1:

1. Data required to perform the calculations in this methodology are population data for the current reporting year, the two reporting years immediately prior to the current reporting year, and the projected data for three years immediately following the current reporting year.

2. Persons served data for the current reporting year, and the two reporting years immediately prior to the current reporting year, are required to perform the calculations in this methodology. This information can be gathered from the HH-2 report as generated by SHPDA.

3. The ratio for the change in population for two age cohorts, Population under 65 and Population age 65 and over, is determined per county. The ratio for the change is a three-year period. The current reporting year is compared to the year three years following the current reporting year. The year immediately prior to the current reporting year is compared to the year two years following the current reporting year. The year-two year prior to the current reporting year is compared to the year immediately following the current reporting year. To show this another way:

Current Reporting Year	--	Current Reporting Year + 3 years
Current Reporting Year	--	Current Reporting Year + 2 years
Current Reporting Year	--	Current Reporting Year + 1 year

4. Projected patients served under the age of 65 for future reporting years are calculated on a county basis by multiplying the year's total persons served by 25% (0.25) to determine the approximate number of persons served under the age of 65. This number is divided by the county population under the age of 65 to determine a utilization rate. To determine the projected patients served under the age of 65, this total is then multiplied by the total projected population for the target year for each county.

5. Projected patients served age 65 and older for future reporting years are calculated on a county basis by multiplying the year's total persons served by 75% (0.75) to determine the approximate number of persons served age 65 and older. This number is divided by the county population 65 and older to determine a utilization rate. To determine the projected patients served age 65 and older, this total is then multiplied by the total projected population for the target year for each county.

6. To determine the total number of projected persons served per county, add the totals from steps 4 and 5.

7. Add the total number of projected persons served, by county, to determine the statewide projected total persons served.

8. Multiply the target year's projected total persons served for the target year by 25% (0.25) to reflect the projected statewide total persons served under the age of 65.

9. Divide the total statewide population under the age of 65 for the target year by 1000.

10. Divide the numeric result from step 8 by the numeric result in step 9.

11. Multiply the target year's projected total persons served by 75% (0.75) to reflect the projected statewide total persons served ages 65 and over.

12. Divide the total statewide population age 65 and over for the target year by 1000.

13. Divide the numeric result from step 11 by the numeric result in step 12.

14. Add the results from steps 10 and 13. This is the projected average statewide persons served per 1000 population, by county, for the target year.
15. Repeat steps 4 through 14 for the second target year.
16. Repeat steps 4 through 14 for the third target year.
17. To determine the projected weighted statewide average persons served multiply the projected statewide average persons served per 1000 population for 3 years after the current reporting year by 3; multiply the projected statewide average persons served per 1000 population for 2 years after the current reporting year by 2; and multiply the projected statewide average persons served per 1000 population for 1 year after the current reporting year by 1.
18. Add the three results determined in step 17 and divide the total by 6 for the projected statewide average persons served per 1000 population.
19. To determine the Current Home Health Comparative Value, multiply the number derived in step 18 by 85% (0.85). This value will be utilized in the comparisons in step 2.

Step 2:

1. Using the data created above for the target year (the year three years after the current reporting year), follow the steps below to determine the future projected need for Home Health Services by county.
2. Multiply the target year's total persons served by 25% (0.25) to reflect the county wide total persons served under the age of 65.
3. Divide the total county wide population under the age of 65 by 1000.
4. Divide the numeric result from step 2 by the numeric result in step 3.
5. Multiply the current year's total persons served by 75% (0.75) to reflect the county wide total persons served ages 65 and over.

6. Divide the total county wide population age 65 and over by 1000.

7. Divide the numeric result from step 5 by the numeric result in step 6.

8. Add the results from steps 4 and 7. This is the projected total persons served per 1000 population used to determine need for Home Health Services in a county.

9. Subtract the result from step 8 from the Current Home Health Comparative Value for each county. If this number is negative, there is no need for a new Home Health provider in a county. If the number is positive, continue to step 10.

10. This number is then divided by the SUM of 0.75 (75%) times 1000 divided by the county population aged 65 and over AND 0.25 (25%) times 1000 divided by the county population under the age of 65. This number is the number of new persons required to be served in a county to bring the county persons served per 1000 value up to the statewide comparative value.

11. A threshold level of 100 new patients needed to be served is required for a determination of need in a county. If the number of new patients needed to be served is less than 100, there is no need for a new Home Health provider in a county. If the number is equal to or greater than 100, there is a need for a new Home Health Care provider in a county.

Step 1:

For each target year by county:

- $(\text{reported year persons served} * 0.25) / (\text{reported year population under 65})$
= utilization rate population under 65
- $\text{Utilization rate} * \text{target year population under 65}$
= projected persons served under 65
- $(\text{reported year persons served} * 0.75) / (\text{reported year population age 65 and over})$
=utilization rate population age 65 and over
- $\text{Utilization rate} * \text{target year population age 65 and over}$

= projected persons served age 65 and over

- Projected persons served under 65 + projected persons served age 65 and over
= Target year projected persons served by county

For each target year:

- Sum of all Target year projected persons served by county
= Target year projected total persons served
- $(\text{Target year projected total persons served} * 0.25) / (\text{Projected population under 65}/1000) + (\text{Target year projected total persons served} * 0.75) / (\text{Projected population age 65 and over}/1000)$

=Projected Statewide Average Persons Served per 1000 Population

To Determine Current Home Health Comparative Value for Step 2:

- $(3 \text{ years after Current Reporting Year Projected Average Persons Served} * 3) + (2 \text{ years after Current Reporting Year Projected Average Persons Served} * 2) + (1 \text{ year after Current Reporting Year Projected Average Persons Served} * 1)$
$$\frac{\hspace{10em}}{6}$$

=Projected Weighted Average Persons Serviced per 1000 Population
- Projected Weighted Average Persons Served per 1000 Population * 0.85
=Current Home Health Comparative Value

Step 2: *(Using population and persons served for 3 years after current reporting year)*

- $(\text{countywide total persons served} * 0.25) + (\text{countywide total persons served} * 0.75)$
- $(\text{countywide population under 65}/1000) + (\text{county population 65 and over}/1000)$

=County Persons Served per 1000 Population
- Current Home Health Comparative Value - County Persons Served per 1000 Population

=County Projected Persons Per 1000 Population in Need of Home Health Services.

- County Projected Persons Per 1000 Population in need of Home Health Services
(0.75 * 1000/Population age 65 and over) + (0.25 * 1000/Population under 65)

=New persons required to be served in county to equal Current Home Health Comparative Value

If number is negative, there is no need in a county.
If number is less than 100, there is no need in a county.
If number is 100 or more, there is a need for a new Home Health provider in a county.

Author: Statewide Health Coordinating Council (SHCC)

Statutory Authority: Code of Ala. 1975, §22-21-260(4).

History: Effective 8, 1993. **Amended:** Filed June 19, 1996; effective July 25, 1996. **Amended:** Filed January 8, 1997; effective February 12, 1997. **Repealed and New Rule:** Filed October 18, 2004; effective November 22, 2004. **Repealed and New Rule:** Filed December 12, 2006; effective January 16, 2008. **Amended (SHP Year Only):** Filed December 2, 2014; effective January 6, 2015. **Amended:** Filed February 10, 2015; effective March 17, 2015. **Repealed and New Rule:** Published March 31, 2020; effective May 15, 2020.

410-2-4-.08 Inpatient Physical Rehabilitation.

(1) **Definition.** Inpatient physical rehabilitation services are those designed to be provided on an integrated

basis by a multidisciplinary rehabilitation team to restore the disabled individual to the highest physical usefulness of which he is capable. These services may be provided in a distinct part unit of a hospital, as defined in the Medicare and Medicaid Guidelines, or in a free-standing rehabilitation hospital.

(2) **General.** Rehabilitation can be viewed as the third phase of the medical care continuum, with the first being the prevention of illness, the second, the actual treatment of disease, and the third, rehabilitation or a constructive system of treatment designed to enable individuals to attain their highest degree of functioning. In many cases, all three phases can occur simultaneously. For the purposes of this section of the State Health Plan, only the need for and inventory of inpatient rehabilitation beds will be addressed.

(3) **Need Determination.** The Statewide Health Coordinating Council (SHCC) has determined that there is a need for 12 rehabilitation beds per 100,000 population for each region.

(4) **Planning Policies**

(a) **Planning Policy.** Regional occupancy for the most recent reporting year should be at least seventy-five percent (75%) before the SHCC considers any requests for plan adjustments for additional bed capacity.

(b) **Planning Policy.** Conversion of existing hospital beds to rehabilitation beds should be given priority consideration over new construction when the conversion is significantly less costly, and the existing structure can meet licensure and certification requirements.

(5) **Bed Availability Assurance.**

(a) It is the determination of SHPDA that accurate data related to provision of and need for inpatient rehabilitation services does not currently exist. The SHCC is also aware, however, that the elder-care population (those aged 65 and over) in Alabama is growing at an increasing rate, and that more citizens may need these services moving forward. Therefore, to allow time for more data to be collected by SHPDA for review of rehabilitation services, the SHCC approves the following one-time mechanism for the expansion of existing inpatient rehabilitation providers, with the understanding that additional data shall be submitted by both inpatient

rehabilitation providers and nursing homes based on the conditions laid out herein.

(b) If the occupancy rate for a single region, including all inpatient rehabilitation facilities ("IRF") and inpatient rehabilitation units of existing acute care hospitals, is greater than eighty percent (80%) utilizing the census data reported on the most recent full year Annual Report for Hospitals and Related Facilities (Form BHD-134A) published by or filed with SHPDA, up to five (5) additional beds may be approved for the expansion of a facility in that region. This expansion may be used by any qualifying IRF or hospital operating an inpatient rehabilitation unit only one (1) time during the initial four (4) year period for which this Plan is effective and only one (1) time per region during that same period. The expansion, however, may not be applied for by any rehabilitation provider until the earlier of (i) the data to be collected pursuant to this section, as defined in paragraph (6) below, has been determined and voted upon by the Health Care Information and Data Advisory Council ("Data Council"), or (ii) October 1, 2020 (the "trigger date"). Upon the earlier of the approval of the data to be collected by the Data Council or the trigger date, SHPDA shall inform the Chair of the SHCC and the Chair of the Certificate of Need Review Board that this one-time expansion provision is available to be applied for by providers meeting the conditions defined in this paragraph.

(c) Any inpatient physical rehabilitation beds granted under this section shall only be added at or upon the existing campus of the applicant facility and cannot be sold or transferred to another provider or location. The only exception to this rule is in the case of an IRF or acute care hospital with an inpatient rehabilitation unit applying for a Certificate of Need to relocate or otherwise create a replacement facility that is consistent with all other parts of this Plan.

(6) The SHCC requires that the Data Council make any changes to the Annual Reports filed by hospitals necessary to capture the data used by Medicare Administrative Contractors to determine presumptive compliance with the inpatient rehabilitation facility compliance threshold requirement, also known as the "60% Rule", including the diagnosis, comorbidities and impairment for each patient. The SHCC requires that the Data Council make any changes to the Annual Reports filed by nursing homes to include comparable patient origin level data to allow for comparison between hospital and nursing home providers. The data supplied should allow for an analysis of

current utilization in such a manner as to reflect all inpatient rehabilitative services being offered, regardless of location or facility type, and should therefore be collected from both hospitals and nursing homes. The data collected should not only provide information related to occupancy rate but should also provide information related to the acuity of patients treated at each facility and should, as closely as possible, collect data that is similar in both type and format to allow for as accurate a comparison as possible, while representing as many patients receiving inpatient rehabilitation services as possible.

(a) Any IRF or acute care hospital that does not substantially comply with any data request made on behalf of SHPDA related to this section shall not be allowed to apply for additional beds under the provisions set forth in paragraph (5) above. Any such application shall be deemed to be inconsistent with this Plan. Furthermore, any nursing home that does not substantially comply with any data request on behalf of SHPDA related to this section shall not be allowed to oppose any application filed on behalf of an IRF or an acute care hospital for additional beds under the provisions set forth in paragraph (5) above. Such barriers to an application for a Certificate of Need, or inability to intervene or oppose an application for a Certificate of Need, shall be applied in a manner consistent with the provisions set forth in Ala. Admin r. 410-1-3-.11.

(b) The provisions set forth in paragraph (5) may only be utilized one (1) time per region during the initial four (4) years following the effective date of this Section, which should allow for a minimum of three (3) years' worth of data to have been collected and analyzed by SHPDA. Once three (3) years' worth of data have been collected by SHPDA according to the provisions set forth in this section, SHPDA shall present to the SHCC an analysis of utilization of all inpatient rehabilitation resources in the state, including those at IRFs, acute care hospitals with inpatient rehabilitation units, and nursing homes. This analysis should also include a proposed replacement for the provisions set forth in paragraph (5) above to provide a mechanism for those hospitals providing inpatient rehabilitation services to expand should such a mechanism be proven to be necessary.

(c) If SHPDA fails to present such an analysis and proposed replacement for the provisions set forth in paragraph (5) within the four (4) year period following the date this Plan becomes effective, the provisions set forth in paragraph (5) shall be renewed and any region meeting the criteria shall

qualify for one (1) additional five (5) bed expansion during the subsequent four (4) year period.

410-2-4-.09 Swing Beds.

(1) **Definition.** A swing bed is a licensed hospital bed that can be used for either a hospital or skilled nursing home patient. A swing bed program is authorized in Alabama to include hospitals that meet the criteria as specified in Federal laws and regulations. In accordance with the appropriate directive and this State Health Plan, a swing bed hospital must meet the following requirements:

(a) must meet the federal requirements addressing the facility size, location, and utilization factors;

(b) must have a valid provider agreement under Medicare;

(c) must meet the discharge planning and social services standards applicable to participating skilled nursing facilities;

(d) must not have a waiver for 24-hour nursing coverage;

(e) must be granted a Certificate of Need by the State Health Planning and Development Agency to provide skilled nursing facility services;

(f) any provider seeking to offer swing beds as a new service is limited to an initial allotment of ten (10) beds;

(g) Subject to the procedure provided in paragraph (2) below, each participating hospital is limited to twenty-five (25) swing beds;

(h) the average length of stay for swing bed patients must not exceed 30 days;

(i) beds authorized as swing beds will remain licensed as general hospital beds and be included in the general acute care inventory and bed need methodology;

(j) critical access hospitals shall be given special consideration in any application for a Certificate of Need for swing beds.

(2) A participating hospital may apply for additional swing beds if it can demonstrate an average occupancy rate for

its existing swing beds greater than eighty percent (80%) for the most recent twelve (12) month period. That hospital may apply for no more than five (5) additional swing beds in any given twelve (12) month period, and its application cannot result in a total number of swing beds exceeding the maximum number set forth in paragraph (1)(g) above.

(3) Any hospital certified and operating as a Critical Access Hospital which is located in a county in which only one Nursing Home is licensed and providing service is not required to meet the occupancy rates in paragraph (2) but must adhere to all other requirements set forth in this section in order to apply for additional swing beds.

For a listing of hospitals with CON authorized swing beds contact the Data Division as follows:

410-2-4-.10 Psychiatric Care.

(1) **Background**

(a) In the early 1990s, the Alabama Department of Mental Health and Mental Retardation developed a psychiatric bed need methodology that provided for an inventory of 37.1 beds per 100,000 population. Originally, the methodology was calculated

using regions; however, in 2003 it was changed to reflect a statewide need methodology. Although the statewide need methodology was helpful in the early years to ensure access to care, it resulted in an uneven distribution of psychiatric beds, with higher concentrations of beds in some regions and shortages of psychiatric beds in other regions of the state.

(b) Over time, the number of psychiatric beds, both private beds and state beds, has declined. States have transitioned funding for mental health services from institutional care to community-based services, as state budgets have been cut and as more is known about the benefits of providing care in a non-institutional, community setting. Alabama mirrors these national trends, as it has closed three state facilities and downsized from 4,000 beds in 2009 to approximately 1,600 beds in 2017. In some areas, community-based services include crisis stabilization and access to timely follow-up care. In other areas, community resources may be limited, and those with psychiatric emergencies often present to a general acute care hospital emergency room for care; some of the more severely mentally ill remain for extended periods of time in private psychiatric facilities, waiting on a state bed to become available.

(2) **Methodology**

(a) Discussion. The Statewide Health Coordinating Council (SHCC) developed a proposal for a new methodology based on the increasing need for psych beds and a better distribution of those beds. Approved by the full SHCC, the purpose of this inpatient psychiatric services need methodology is to identify, by region and by bed type, the number of inpatient psychiatric beds needed to ensure the continued availability, accessibility, and affordability of quality inpatient psychiatric care for residents of Alabama. Only the SHCC, with the Governor's approval, can make changes to this methodology. The State Health Planning and Development Agency (SHPDA) staff shall annually update statistical information to reflect more current utilization through the Hospital Annual Survey.

(b) Bed Need Determined by Region and by Category of Bed. The new methodology is based upon the regional needs of the state as opposed to a statewide need methodology. It also addresses need based on the category of patients served in the beds being used; the bed categories include: 1. Child/Adolescent; 2. Adult; and 3. Geriatric. Calculation of beds needed will be based on utilization of those beds by

category and by region as reported annually in the Hospital Annual Report. The Hospital Annual Report must be amended to accomplish the purposes of this new methodology. This new methodology will become effective after the certification by the Healthcare Information and Data Advisory Council of the first new Hospital Annual Report following the passage of this amendment. All providers will report their licensed beds, operating beds and patient days by inpatient psychiatric category each year via the new Hospital Annual Report. Operating beds may be the same as or fewer than the total number of licensed psychiatric beds. Providers with unrestricted psychiatric beds obtained prior to the effective date of this new methodology shall be allowed to change the categories of their beds during the first two reporting periods. The bed allocation by category reported on the third Hospital Annual Report following the passage of this amendment shall be considered final for operating beds. Thereafter, any permanent change to a different inpatient psychiatric bed category for an existing operating bed or beds will require the approval of a new CON. This requirement will not apply to licensed beds not currently in use; however, once beds are put into use, the provider will have to declare the category(ies) of the beds.

After this methodology becomes effective, applicants for new inpatient psychiatric beds will be required to select a category (Child/Adolescent, Adult, Geriatric) for which they are seeking inpatient psychiatric beds. Applicants may apply for more than one inpatient psychiatric category if a need is shown. See Section (3)(c), below regarding new beds.

Note: This new methodology is intended for planning purposes. The declaration of psychiatric beds by category on the Hospital Annual Report is not intended to preclude providers from using their psychiatric beds as necessary to address seasonal needs and surge situations. If a hospital determines that it needs to permanently change its psychiatric bed allocation, a new CON will be required. This new methodology, however, does not apply to pediatric specialty hospital providers, and is not intended: to preclude pediatric specialty hospital providers from using their pediatric specialty beds to provide pediatric psychiatric services, as necessary; to require such providers to report or declare via the SHPDA Hospital Annual Report their pediatric specialty beds used for pediatric psychiatric services as psychiatric beds, with related patient days, by inpatient category; or require such providers to obtain a CON for any new or additional use of their pediatric specialty beds for the

provision of any pediatric specialty services, including pediatric psychiatric services.

(3) **Planning Policies**

(a) Planning on a Regional Basis. Planning will be on a regional basis. Please see attached listing for the counties in each region as designated by the SHCC.

(b) Planning Policies for applicants.

1. An applicant for an inpatient psychiatric bed must be either: 1) an established and licensed hospital provider that has been operational for at least twelve (12) months; or, 2) a new inpatient psychiatric hospital seeking a minimum of at least twenty (20) inpatient psychiatric beds. (Specialty, Free-Standing Psychiatric Hospitals must have at least twenty (20) inpatient beds pursuant to Rule 420-5-7-.03 Classification of Hospitals, found in Chapter 420-5-7 of the Alabama Department of Public Health Administrative Code.)

2. An applicant for inpatient psychiatric beds in a particular category must demonstrate the ability to comply with state law.

3. In Certificate of Need decisions concerning psychiatric services, the extent to which an applicant proposes to serve all patients in an area should be considered. The problem of indigent care should be addressed by Certificate of Need applicants.

(c) Applying for Additional beds. Applicants may apply for new psychiatric beds using one of the following occupancy need determinations:

1. Regional occupancy calculation. Any region that shows an occupancy rate of 75 percent (75%) or greater in any one of the three (3) bed categories shall be eligible for additional beds in that category. The number of additional beds needed shall be calculated by dividing the average daily census for the region by the desired occupancy rate of 70 percent (70%) and then subtracting from this number the current beds in operation. Information for this calculation shall be obtained from the most recent Hospital Annual Report as compiled by SHPDA. Beds granted under the regional methodology shall be deemed part of the official regional bed inventory at time of issuance. See formula below:

To calculate regional occupancy:

Total patient days/(Beds operating x days in Reporting Period)

To calculate beds needed to get the region to 70 percent (70%) occupancy:

(i) (Total patient days/days in Reporting Period)/.70
= total beds needed for the region to have a 70 percent (70%) occupancy rate.

(ii) To calculate additional beds needed for the region:

Total beds needed to reach 70 percent (70%) occupancy rate minus current beds in operation.

The total patient days and the beds in operation used for the calculations shall come from the information reported to SHPDA through the most recent Hospital Annual Report.

The following is an example of how the regional methodology would be calculated if a single region had 25,000 adult patient days and 90 adult beds:

To calculate the regional occupancy:

25,000 adult days/(90 beds operating x days in Reporting Period) = 76% regional occupancy

To calculate beds needed to have a 70% occupancy:

(25,000 adult days/days in Reporting Period)/.70 = 98 total beds needed for that occupancy level

Beds needed (98) minus current beds (90) = 8 additional adult beds needed for the region.

2. Individual Provider Occupancy Calculation.

(i) If the average occupancy rate for a single facility within a region is 80 percent (80%) or greater for a continuous period of twelve (12) months in any of the three (3) bed categories, as calculated by the SHPDA using data reported on the most recent Hospital Annual Report, that facility may

apply for up to 10 percent (10%) of its current bed capacity or six (6) beds, whichever is greater. An individual facility may demonstrate a need based on occupancy irrespective of the total occupancy for the region in that bed category. Information for this calculation shall be obtained from the most recent Hospital Annual Report as compiled by SHPDA.

(ii) Any beds obtained through the Individual Provider Occupancy Calculation shall not be included in the regional bed calculation for a period of three years after the beds are brought into service. After this three-year period the beds shall be included in the regional count. Any provider obtaining beds through this provision shall not be eligible to use the 10 percent rule for 24 months from the date the CON is granted.

(4) **Plan Adjustments.** The psychiatric bed need for each region as determined by the methodology is subject to adjustments by the SHCC. The psychiatric bed need may be adjusted by the SHCC if an applicant can prove that the identified needs of a target population are not being met by the current bed need methodology.

410-2-4-.11 Substance Abuse.**(1) Discussion**

(a) The National Household Survey on Drug Abuse (NHSDA) estimated 22.2 million Americans age twelve (12) or older in 2012 were classified with dependence on or abuse of either alcohol or illicit drugs, a figure significantly higher than in 2000 - about 14.5 million. Most of these persons (14.9 million) were dependent on or abused alcohol only. Another 2.8 million were dependent on or abused both alcohol and illicit drugs, while 4.5 million were dependent on or abused illicit drugs but not alcohol. Persons age eighteen (18) to twenty-five (25) had the highest rates of alcohol dependence or abuse (14.8%). (Source: www.samhsa.gov)

(b) There are more deaths and disabilities each year in the United States from Substance Abuse than from any other cause. One-quarter of all emergency room visits, one-third of all suicides, and more than one half of all homicides and incidents of domestic violence are alcohol-related. (Source: www.ncadd.org)

(c) Alcohol and drug abuse costs the American economy an estimated \$276 billion per year in lost productivity, health care expenditures, crime, motor vehicle crashes and other conditions. (Source: www.ncadd.org)

(2) Background

(a) Substance abuse services for persons with both dependence and abuse problems is provided through an array of private and public providers throughout the state. The array of services ranges from inpatient medical detoxification services to residential treatment services to a variety of outpatient types of services including various affiliated support groups.

(b) In the past few years the technology for treating individuals with dependence and abuse problems has changed rather dramatically from a traditional inpatient/residential mode to outpatient treatment. This has occurred for a variety of reasons including financial considerations. These phenomena can be verified through analysis of current utilization of both inpatient and residential services.

(3) Methodology

(a) The Alabama Department of Mental Health (DMH) has developed a substance abuse bed need methodology, which is based upon a formula utilized in other states, commonly referred to as the "Mardin Formula". This prevalence base formula was selected in lieu of utilization-based formulas due to the lack of comprehensive statistical information on the current utilization of residential treatment centers. Calculation of needed beds is performed as follows:

(b) Step 1: Multiply the population ages 10-17 by 19%, which is the proportion assumed to have problems with chemical dependency;

(c) Step 2: Multiply the population ages 18 and over by 7%, which is the proportion assumed to have problems with chemical dependency;

(d) Step 3: Multiply the sum of steps 1 and 2 by 12%, which is the proportion who will seek treatment annually;

(e) Step 4: Multiply the product in step 3 by 60% which is the proportion of those seeking treatment who will require detoxification services for 3 days. Calculate total number of patient days;

(f) Step 5: Multiply those receiving detoxification services by 50%, which is the proportion who will need residential treatment for 10 days. Calculate total number of patient days;

(g) Step 6: Add the patient days in steps 4 and 5 to arrive at total patient days;

(h) Step 7: Divide by 365 to determine average daily census (ADC);

(i) Step 8: Divide by 80% occupancy to arrive at total needed beds;

(j) Step 9: Subtract existing public beds to arrive at total private bed need;

(k) Step 10: Subtract existing private beds to determine need or excess.

(4) **Methadone Treatment**

(a) Definition. Methadone is an opioid agonist medication used to treat heroin and other opiate addiction. Methadone reduces the craving for heroin and other opiates by blocking receptor sites that are affected by heroin and other opiates.

(b) Background

1. Prior to June 1991 Alabama operated two methadone clinics in Birmingham and in Mobile, both of which were operated through a DMH contract. These clinics are part of the UAB Mental Health Center and the Mobile Mental Health Center. The average number of clients served in any given month never exceeded 380 of which fewer than 5% were clients from out of state.

2. As of April 2015, Alabama has twenty-two (22) certified methadone treatment programs.

(c) Recommendations

1. A methadone treatment program should provide adequate medical, counseling, vocational, educational, mental health assessment, and social services to patients enrolled in the opioid treatment program with the goal of the individual becoming free of opioid dependency, with oversight by the Alabama Department of Mental Health.

2. The Methadone Advisory Committee suggests the following information be submitted with Certificate of Need applications:

(i) The number of arrests for the previous year regarding the sale and possession of opioids by county for the area to be served.

(ii) Data from the Medical Examiner regarding all deaths related to overdose from opioids by county for the area to be served during the previous year.

(iii) Data from all hospital emergency rooms regarding the number of persons diagnosed and treated for an overdose of opioids by county for the area to be served.

(iv) The number of clients within specific geographic areas who, out of necessity, must travel in excess of 50 miles round-trip for narcotic treatment services.

(v) The name and number of existing narcotic treatment programs within 50 miles of the proposed site.

(vi) Number of persons to be served by the proposed program and the daily dosing fee.

(vii) Applicant shall submit evidence of the ability to comply with all applicable rules and regulations of designated governing authorities.

(d) Need

1. Basic Methodology

(i) The purpose of this need methodology is to identify, by region, need for additional treatment facilities to ensure the continued availability, accessibility, and affordability of quality opioid replacement treatment services for residents of Alabama.

(ii) A multi-county region shall be the planning area for methadone treatment facilities. A listing of the counties in each region is attached as part of this section. These were derived from the regions used by the Alabama Department of Mental Health (ADMH), Division of Mental Health and Substance Abuse Services.

(iii) The Center for Business and Economic Research, University of Alabama, (CBER) population data shall be used in any determination of need for methadone treatment facilities in Alabama.

(iv) Data from the National Survey on Drug Use and Health (NSDUH) shall be used in the calculation of national rates of dependency on heroin or prescription pain relievers in Alabama.

(v) Data from ADMH shall be used in the determination of the number of current patients seen by each clinic within a region. ADMH shall supply, on an annual basis, an Annual Report to SHPDA with rates of prevalence, service utilization and epidemiological data to assist with implementation of the methodology and publication of statistical updates to this plan.

(vi) For each region, need shall be calculated using the following methodology:

(I) For each county in the region, list the population, ages 18 and over, as reported by CBER, for the year matching the year for which need is being projected.

(II) Using NSDUH data for the same time period, determine the rate of dependency on heroin and prescription pain relievers nationally.

(III) For each county in the region, multiply the population from step (i) above by the dependency rate in step (ii) above to determine the projected number of residents in that county addicted to heroin or prescription pain relievers.

(IV) Multiply the estimate from step (iii) above by 20% (0.2) to determine the projected number of residents of that county likely to seek Medication Assisted Therapy for opioid dependency.

(V) Add the county totals determined in step (iv) above to determine the regional totals.

(VI) Using data supplied by ADMH, determine the current census of each treatment center in the region on the last day of the year matching the year of population and NSDUH dependency data used in step (i) and step (ii) respectively.

(VII) Add the facility census totals determined in step (vi) above to determine regional totals.

(VIII) If the number of residents projected to seek treatment in a region as determined in step (v) is greater than the current census of all treatment centers in the region as determined in step (vii) by more than 10%, a need shall be shown for a new methadone treatment facility in that region.

(IX) Only one methadone treatment facility may be approved in any region showing a need under this methodology during any application cycle, defined here as the period of time between the date of publication of one statistical update and the date of publication of a successive update.

(X) Upon the issuance of a Certificate of Need for a new methadone treatment facility in a region, no additional CONs shall be issued for the development of a new methadone treatment facility in that region for a period of eighteen (18) months to allow for the impact of a new provider in the region to be shown and reflected in the next statistical update.

2. The provisions of subsection 1 above shall not prohibit the grant of a Certificate of Need for the relocation and replacement of an existing methadone treatment facility within the same planning region.

3. All methadone clinic applications shall be site specific. No CON shall be granted for a new methadone treatment facility to be located within fifty (50) linear miles of an existing methadone treatment facility.

(e) Adjustments. Need for additional methadone treatment facilities, as determined in subsection 1 above, is subject to adjustment by the SHCC as provided below. The SHCC may adjust the need for a new methadone treatment facility only upon demonstration of one or more of the following conditions listed in 1 through 3 below. Applicants seeking an adjustment under this section shall include, as part of the application, supporting documentation from ADMH.

1. The opioid-related arrest or death rate in the region exceeds the national average, and there are no methadone treatment facilities within fifty (50) miles of the county for which the proposed adjustment applies.

2. Hospital emergency room admissions for opioid-overdose related conditions in the region exceed the national average, and there are no methadone treatment facilities within fifty (50) miles of the county for which the proposed adjustment applies.

3. Admissions to drug-free programs specifically treating opioid dependency in the region exceed the national average, and there are no methadone treatment facilities within fifty (50) miles of the county for which the proposed adjustment applies.

(f) Preference for Indigent Patients. In considering CON applications filed under this section, whether pursuant to the regular need methodology or an adjustment, preference shall be given to those applicants demonstrating the most comprehensive plan for treating patients regardless of their ability to pay.

Author: Statewide Health Coordinating Council (SHCC)

Statutory Authority: Code of Ala. 1975, §22-21-260(4).

History: Effective April 23, 1991. **Amended:** Filed June 19, 1996; effective July 25, 1996. **Repealed and New Rule:** Filed October 18, 2004; effective November 22, 2004. **Amended:** Filed August 16, 2012, effective September 20, 2012. **Amended:** Filed November 20, 2013; effective December 25, 2013. **Amended (SHP Year Only):** Filed December 2, 2014; effective January 6, 2015. **Amended:** Filed September 9, 2015; effective October 14, 2015. **Repealed and New Rule:** Published March 31, 2020; effective May 15, 2020.

410-2-4-.12 Ambulatory Surgery.

(1) **Discussion.** An evolution in the provision of surgical care provided in ambulatory surgery centers has taken place. As a result of cost containment measures and advances in medical technology, many surgical procedures which previously required inpatient care (both before and after the procedures) are now done on an outpatient basis.

(2) **Definition.** Ambulatory surgery centers (ASC) are health care facilities, licensed by the Alabama Department of Public Health, with the primary purpose of providing medically necessary or elective surgical care on an outpatient basis and in which the patient stays less than twenty-four (24) hours. Excluded from this definition are the offices of private physicians and dentists, including those organized as professional corporations, professional associations, partnerships, or individuals in sole proprietorship. Also excluded from this definition are health care facilities licensed as hospitals. Ambulatory surgery centers may be multi-specialty in which more than one surgical specialty is represented or a specialized ambulatory surgery center in which a single, exclusive surgical specialty is provided.

(3) **Inventory of Existing Resources.** Before meaningful planning policies can be developed, the SHCC must have at its disposal outpatient surgical utilization data for both licensed acute care hospitals and ambulatory surgery centers.

SHDPA shall survey annually all licensed and/or Medicare certified hospitals and ambulatory surgery centers, as defined herein, regarding outpatient surgical utilization. The SHCC recommends that SHDPA promulgate the following CON regulations:

(a) Any CON application filed by a licensed hospital or an ambulatory surgery center shall not be deemed complete until, and unless:

1. the applicant has submitted all survey information requested by SHPDA prior to the application date; and

2. the SHPDA Executive Director determines that the survey information is substantially complete.

(b) No licensed hospital or ambulatory surgery center filing an intervention notice or statement in opposition in any CON proceeding may cite or otherwise seek consideration by SHPDA of such facility's utilization data until, and unless:

1. the intervenor or opponent has submitted all survey information requested by SHPDA prior to the application date; and

2. the SHPDA Executive Director determines that the survey information is substantially complete.

The SHCC recommends that the Certificate of Need Review Board adopt this and other CON regulations to further support and enforce SHPDA's survey of outpatient surgical utilization data as required under this Section.

The SHCC, upon receipt of meaningful utilization data from all licensed hospitals and ambulatory surgery centers, shall amend this section to include further definitions and planning policies as appropriate and applicable. Any amendment adopted as result of this provision shall be considered to have been generated by the SHCC and shall not be subject to any fees that may later be imposed on parties seeking a *State Health Plan* amendment or adjustment.

(1) Renovation is defined as a project for modernization, improvement, alteration and/or upgrading of an existing physical plant and/or equipment. Renovation does not include the modernization or construction of a non-clinical building, parking facility, or any other non-institutional health services capital item on the existing campus of a health care facility, provided that construction or modernization does not allow the health care facility to provide new institutional health services subject to review and not previously provided on a regular basis.

(2) Planning Policies

(a) The applicant must demonstrate that the proposed renovation is the most cost effective or otherwise most appropriate alternative to provide patients with needed health care services and/or facility improvements.

(b) The applicant must provide evidence that the proposed square footage, construction cost per square foot, and cost of fixed equipment is appropriate and reasonable for the types and volumes of patients to be served.

(c) The applicant must demonstrate how the disruption of normal operations will be minimized during the period of construction.

(3) Needs Assessment.

(a) For the renovation of a health care facility an applicant must submit significant evidence of need for the

project. Evidence of need for the project should include, but is not limited to, one or more of the following:

1. The service being provided by the applicant requires additional space or the facility requires renovation to meet minimum licensure and certification requirements.

2. There are operating problems which can best be corrected by renovation of the existing facility.

3. The renovation will correct deficiencies that place the health and safety of patients and/or employees at significant risk.

Statutory Authority: Code of Ala. 1975, §22-21-260(4).

History: New Rule: Filed May 14, 1997; effective June 18, 1997. **Repealed and New Rule:** Filed October 18, 2004; effective November 22, 2004. **Amended (SHP Year Only):** Filed December 2, 2014; effective January 6, 2015. **Repealed and New Rule:** Published March 31, 2020; effective May 15, 2020.

410-2-4-.14 Replacements.

(1) Replacement is defined as a project for the erection, construction, creation or other acquisition of a physical plant or facility where the proposed new structure will replace an existing structure and will be located in the same planning area and market area. Replacement does not include the modernization or construction of a non-clinical building, parking facility, or any other non-institutional health services capital item on the existing campus of a health care facility, provided that construction or modernization does not allow the health care facility to provide new institutional health services subject to review and not previously provided on a regular basis.

(2) Planning Policies

(a) The applicant must demonstrate that the proposed replacement is the most cost effective or otherwise most appropriate alternative to provide patients with needed health care services and/or facility improvements.

(b) The applicant must provide evidence that the proposed square footage, construction cost per square foot, and

cost of fixed equipment is appropriate and reasonable for the types and volumes of patients to be served.

(c) The applicant for the proposed replacement must be the same as the owner of the facility to be replaced.

(3) **Needs Assessment**

(a) For replacement of a health care facility an applicant must submit significant evidence of need for the project. Evidence of need for the project should include, but is not limited to, one or more of the following:

1. The existing structure requires replacement to meet minimum licensure and certification requirements.

2. There are operating problems, which can best be corrected by replacement of the existing facility.

3. The replacement of the existing structure will correct deficiencies that place the health and safety of patients and/or employees at significant risk.

(b) For replacement of hospitals, the occupancy rate for the most recent annual reporting period should have been at least 60%. If this occupancy level was not met, the hospital should agree to a reduction in bed capacity that will increase its occupancy rate to 60 percent. For example, if a 90-bed hospital had an average daily census (ADC) of 45 patients, its occupancy rate was 50%. (The ADC of 45 patients divided by 90 beds equals 50 percent). To determine a new bed capacity that would increase the hospital's occupancy rate to 60%, divide the ADC of 45 patients by 0.60 (a fraction of a bed should be rounded upward to the next whole bed). The hospital's new capacity should be 75 beds, a 15-bed reduction to its original capacity of 90 beds.

410-2-4-.15 Inpatient Hospice Services.

(1) **Discussion**

(a) Hospice care is a choice made to enhance end of life. Hospice focuses on caring and comfort for patients and not curative care. In most cases, care is provided in the patient's place of residence.

(b) It is the intent of this section to address health planning concerns relating to hospice services provided on an inpatient basis. For coverage of hospice services provided primarily in the patient's place of residence, please see Section 410-2-3-.10.

(c) A hospice program is required by federal statutes as a Condition of Participation for hospice care (Title 42- Public Health; Chapter IV - CMS, Department of Health and Human Services; Part 418 - Hospice care; Section 418.98 or successors) and state statutes and regulations (Alabama State Board of Health, Department of Public Health; Administrative Code, Chapter 420-5-17; Section 420-5-17-.01 or successors) to provide general inpatient level of care and inpatient respite level of care as two of the four levels of hospice care. As per the Medicare Condition of Participation (418.108), the total number of inpatient days used by Medicare beneficiaries who elected hospice coverage in a 12-month period in a particular hospice may not exceed twenty percent (20%) of the total number of hospice days consumed in total by this group of beneficiaries.

(d) A hospice program per federal statute must provide the inpatient levels of care that meets the conditions of participation specified. The approved locations for inpatient hospice care are a hospital, a skilled nursing facility ("SNF"), or an inpatient hospice facility.

(e) A hospice program may provide the inpatient levels of care in a freestanding inpatient facility/unit which the hospice program owns and manages; through beds owned by either a hospital or a skilled nursing facility ("SNF") but leased and managed by a hospice program; or through contracted arrangements with another hospice program's inpatient facility/unit.

(2) **Definitions**

(a) All definitions included in Section 410-2-3-.10 are incorporated herein by reference.

(b) Inpatient hospice facility. An "Inpatient Hospice Facility" is defined as a freestanding hospice facility or a designated unit, floor or specific number of beds located in a skilled nursing facility or hospital leased or under the management of a hospice services provider.

(c) General Inpatient Level of Care. The general inpatient ("GIP") level of hospice care is intended for short term acute care for pain control and symptomatic management. It is not intended for long term care, residential or rehabilitation.

(d) Inpatient Respite Level of Care. The inpatient respite level of care is limited per Medicare and Medicaid to a maximum of five (5) days per episode for the purpose of family respite.

(3) **Availability and Accessibility**

(a) Hospice services must be obtainable by all of the residents of the State of Alabama.

(b) Physicians and other referral sources may be unfamiliar with the total scope of services offered by hospice; accessibility may be limited due to lack of awareness. Every provider should provide an active community informational program to educate consumers and professionals to the availability, nature, and extent of their hospice services provided.

(c) In order for a SNF to provide the inpatient levels of care for hospice patients, the SNF must meet the standards specified by CMS regarding items such as required staffing of facilities.

(d) Hospice agencies are limited in establishing contracts with hospitals for the inpatient levels of care. This is due to (a) the increased number of hospice providers that request contracts from the same hospitals in the same service areas; and (b) the reimbursement hospitals receive from the hospice providers for the hospice inpatient levels of care.

(4) **Inventory**

(a) The establishment of an inpatient hospice facility does not eliminate the need for contractual

arrangements with hospitals or SNF for inpatient levels of care. If the inpatient hospice facility is at full capacity and a hospice patient is eligible for/requires inpatient care, the hospice remains responsible to provide that level of care at a contracted facility.

(5) **Quality.**

(a) Quality is that characteristic which reflects professionally and technically appropriate patient services. Each provider must establish mechanisms for quality assurance, including procedures for resolving concerns identified by patients, physicians, family members, or others in patient care or referral. Providers should also develop internal quality assurance and grievance procedures.

(b) Providers are encouraged to achieve a utilization level which promotes the most cost-effective service delivery.

(c) Hospice programs are required to meet the most stringent or exceed the current Medicare Hospice Conditions of Participation, as adopted by CMS, and codified in the Code of Federal Regulations, along with State Licensure Regulations of the Department of Public Health.

(6) **Inpatient Hospice Facility Need Methodology**

(a) Purpose. The purpose of this inpatient hospice services need methodology is to identify, by region, the number of inpatient hospice beds needed to assure the continued availability, accessibility, and affordability of quality of care for residents of Alabama.

(b) General. Formulation of this methodology was accomplished by a committee of the Statewide Health Coordinating Council (SHCC). The committee, which provided its recommendations to the SHCC, was composed of providers and consumers of health care, and received input from hospice providers and other affected parties. Only the SHCC, with the Governor's final approval, can make changes to this methodology, except that SHPDA staff shall annually update statistical information to reflect more current population and utilization. Adjustments are addressed in paragraph (e) below.

(c) Basic Methodology

1. The purpose of this need methodology is to identify, by region, the number of inpatient hospice beds needed to assure the continued availability, accessibility, and affordability of quality hospice care for residents of Alabama.

2. The need methodology shall be calculated by aggregating the reported average daily censuses (ADC) for all licensed hospices in the designated Region, as reported annually to SHPDA, and multiplying that aggregate regional ADC by 3%. The resulting figure shall be the regional need.

3. Any increase in regional need shall be limited to no more than five percent (5%) per year with the sole exclusion of any need determined under Planning Policy 7 of this section.

(d) Planning Policies

1. Planning will be on a regional basis. The attached listing defines the regional descriptions designated by the SHCC.

2. An applicant for an inpatient hospice facility must be an established and licensed hospice provider and operational for at least thirty-six (36) months in Alabama.

3. An applicant for an inpatient hospice facility must demonstrate the ability to comply with Medicare/Medicaid regulations.

4. An applicant for an inpatient hospice facility must demonstrate that existing inpatient hospice beds in the region cannot meet the community demand for inpatient hospice services.

5. An applicant for an inpatient hospice facility must demonstrate that sharing arrangements with existing facilities have been studied and implemented when possible.

6. An applicant for an inpatient hospice facility may provide supplemental evidence in support of its application from other data reported by licensed hospices on an annual basis to the State of Alabama or the Federal Government.

7. Additional need may be shown in situations involving a sustained high occupancy rate either for a region or for a single facility. An applicant may apply for additional beds, and thus the establishment of need above and beyond the

standard methodology, utilizing one of the following two policies. Once additional beds have been applied for under one of the policies, that applicant shall not qualify to apply for additional beds under either of these policies unless and until the established time limits listed below have passed. All CON Authorized Inpatient Hospice beds shall be included in consideration of occupancy rate and bed need.

(i) If the total combined occupancy rate for all CON Authorized Inpatient Hospice facilities in a region is above 90% as calculated by SHPDA using data reported on the most recent full year "Annual Report for Hospice Providers (Form HPCE-4)" published by or filed with SHPDA, an additional need of the greater of five percent (5%) of the current total CON Authorized bed capacity of that region or five (5) total beds may be approved for the expansion of an existing facility within that region. Once additional bed need has been shown under this policy, no new need shall be shown in that region based upon this rule for twenty-four (24) months following issuance of the initial CON to allow for the impact of those beds in that region to be analyzed. Should the initial applicant for beds in a region not apply for the total number of beds allowed under this rule, the remaining beds would then be available to be applied for by other providers in the region meeting the conditions listed in this rule.

(ii) If the occupancy rate for a single facility within a region is greater than 90% as calculated by SHPDA using data reported on the most recent full year "Annual Report for Hospice Providers (Form HPCE-4)" published by or filed with SHPDA, irrespective of the total occupancy rate for all CON Authorized Inpatient Hospice facilities in that region, up to five (5) additional beds may be approved within that region for the expansion of that facility only. Once additional beds have been approved under this policy, no new beds shall be approved for that facility for twenty-four (24) months following issuance of the CON to allow for the impact of those beds at that facility to be analyzed.

8. No application for the establishment of a new, freestanding Inpatient Hospice facility shall be approved for fewer than ten (10) beds to allow for the financial feasibility and viability of a project. Need may be modified by the Agency for any county currently showing a need of more than zero (0) but fewer than ten (10) total beds to a total need of ten (10) new beds, but only in the consideration of an application for the construction of a new, freestanding facility in a region in

which no freestanding Inpatient Hospice currently exists. Need shall not be adjusted in consideration of an application involving the expansion of a CON Authorized Inpatient Provider, nor shall need be adjusted according to this rule in any region wherein a CON Authorized freestanding Inpatient Hospice facility already exists.

(e) Adjustments

The need for inpatient hospice beds, as determined by the methodology, is subject to adjustments by the SHCC. The SHCC may adjust the need for inpatient hospice beds in a region if an applicant documents the existence of at least one of the following conditions:

1. Absence of available inpatient beds for a hospice certified for Medicaid and Medicare in the proposed region, and evidence that the applicant will provide Medicaid and Medicare-certified hospice services in the region; or

2. Absence of services by a hospice in the proposed region that serves patients regardless of the patient's ability to pay, and evidence that the applicant will provide services for patients regardless of ability to pay.

3. A community need for additional inpatient hospice services greater than those supported by the numerical methodology.

(7) **Inpatient Hospice Regions**

The attached "Inpatient Hospice Regional County Listing" is hereby adopted as an Appendix "A" to Section 410-2-4-.15.

410-2-4-.16 Freestanding Emergency Departments (FEDs).

A "Freestanding Emergency Department" or "FED" is a new institutional health service requiring a Certificate of Need under Alabama law. In addition to other applicable criteria, all proposed FEDs must demonstrate, through substantial evidence, that their project will meet all the requirements for licensure under ALA. ADMIN. CODE r 420-5-9, which is incorporated herein by reference.
